- Java

Java

Array

Arrays

- `Arrays.asList(array)`: `array` `List`
 - `ArrayList` `LinkedList`
- `Arrays.sort(array)`: `array`

String Class

- `charAt(index)`: `index`
- `indexOf(a_Char)`: `index`
- `equals(str_Object)`:

StringBuilder

- `append(element)`: `Builder`
- `toString()`: `Builder`

Map

HashMap

- `put(key, value)`: 添加 key-value
- `get(key)`: 根据 key 获取 value
- `remove(key [, value])`: 删除 key (如果 value 不为 null 则 value 必须匹配)

List

ArrayList 和 LinkedList 是 List 的子类

- `size()`: 返回 ArrayList 的大小
- `add(index, element)`: 在 index 位置添加 element (index 从 0 开始)
- `remove(object)` / `remove(index)`: 删除 object 或 index 位置的元素
- `sort(comparator)`: 对 ArrayList 进行排序
- `indexOf(element)`: 返回 element 在 ArrayList 中的索引
- `getFirst()` / `getLast()`: 获取第一个或最后一个元素
