0027 - Remove Element

Input: nums = [0,1,2,2,3,0,4,2], val = 2

Output: 5, nums = [0,1,4,0,3,_,_,_]

Explanation: Your function should return k = 5, with the first five elements of nums containing 0, 0, 1, 3, and 4. Note that the five elements can be returned in any order.

It does not matter what you leave beyond the returned k (hence they are underscores).

0026

```
class Solution {
    public int removeElement(int[] nums, int val) {

- Java

Java

Array

Arrays

- `Arrays.asList(array)`: `array` `List`
 - `ArrayList` `LinkedList`
- `Arrays.sort(array)`: `array`

String Class

- `charAt(index)`: `index`
- `indexOf(a_Char)`: `index`
- `equals(str_Object)`:

StringBuilder

- `append(element)`: `Builder`
- `toString()`: `Builder`

Map

HashMap

- `put(key, value)`: 添加 key-value
- `get(key)`: 根据 key 获取 value
- `remove(key [, value])`: 删除 key (如果 value 不为 null 则 value 必须为 null)

List

ArrayList 和 LinkedList 是 List 的子类

- `size()`: 获取 ArrayList 的大小
- `add(index, element)`: 在 index 位置添加 element (index 从 0 开始)
- `remove(object)` / `remove(index)`: 删除 object 或 index 位置的元素
- `sort(comparator)`: 对元素进行排序
- `indexOf(element)`: 获取 element 的 index
- `getFirst()` / `getLast()`: 获取第一个或最后一个元素
