# 0027 - Remove Element

**Input:** nums = [0,1,2,2,3,0,4,2], val = 2

**Output:** 5, nums = [0,1,4,0,3,\_,\_,\_]

**Explanation:** Your function should return k = 5, with the first five elements of nums containing 0, 0, 1, 3, and 4. Note that the five elements can be returned in any order.

It does not matter what you leave beyond the returned k (hence they are underscores).

# 0066 - Plus One

 +1 

**Input:** digits = [1,2,3]

**Output:** [1,2,4]

**Explanation:** The array represents the integer 123.

Incrementing by one gives  $123 + 1 = 124$ .

Thus, the result should be [1,2,4].

**Input:** digits = [9]

**Output:** [1,0]

**Explanation:** The array represents the integer 9.

Incrementing by one gives  $9 + 1 = 10$ .

Thus, the result should be [1,0].

## String Class

- `charAt(index)`: `index`
- `indexOf(a_Char)`: `index`
- `equals(str_Object)`:

## StringBuilder

- `append(element)`: `Builder`
- `toString()`: `Builder`

## Map

## HashMap

- `put(key, value)`: 添加 key-value
- `get(key)`: 根据 key 获取 value
- `remove(key [, value])`: 删除 key (如果 value 不为 null 则 value 必须匹配)

# List

ArrayList 和 LinkedList 是 List 的子类

- `size()`: 获取 ArrayList 的大小
- `add([index], element)`: 添加元素到 ArrayList (如果 index 不为 null 则 index 必须在 0 到 size-1 之间)
- `remove(object)` / `remove(index)`: 删除元素
- `sort(comparator)`: 对 ArrayList 进行排序
- `indexOf(element)`: 获取 element 在 ArrayList 中的索引
- `getFirst()` / `getLast()`: 获取第一个/最后一个元素
